EPILYSIS 
SOLVER

Products Map

What is EPILYSIS ?

Linear Analyses

- Static (SOL101)
- Real Eigenvalue (SOL103)
- Complex Modal (SOL110)
- Direct Transient Response (SOL108)
- Direct Frequency Response (SOL109)
- Modal Transient Response (SOL111)
- Modal Frequency Response (SOL112)

Optimization (SOL200)

- Sizing
- Topometry
- Topology
- Shape

Non-linear Contacts (SOL400)

- Linear Elements / Materials

Performance

MUMPS linear solver

MPI interface

MKL ILP64

Performance Upgrades

Parameter LSOLVER with options:

1. MUMPS
2. PARDISO

- A mature solver with established track record in industry
- Excellent memory management
- Improved multi-threaded performance
- Reduces the performance penalty for large models

v22.0.x

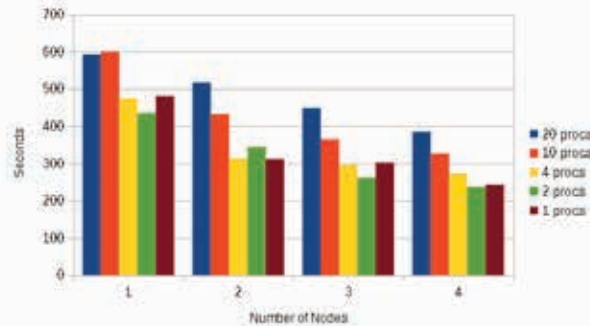

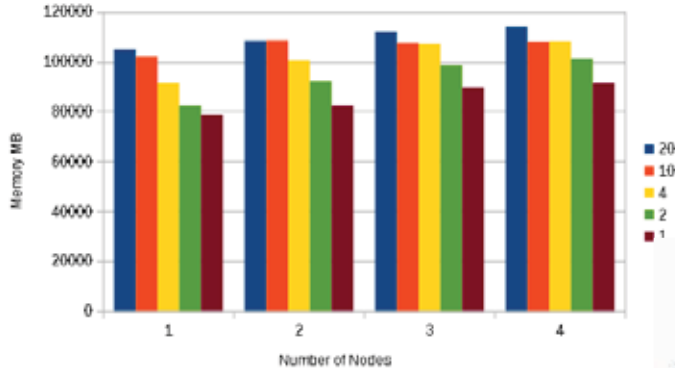

MUMPS linear solver

(Multifrontal Massively
Parallel Sparse direct
solver)

Performance Upgrades

Current restrictions for solving with MPI:

- Supported for all static and dynamic solutions.
- Supported only for Linux machines with Intel processors.

High performance computing "Message Passing Interface (MPI)"

Performance Upgrades

MKL LP64

Old 32bit MKL library had limitations in very large models and multiple loadcases.

MKL ILP64

New 64bit MKL library removes the limitations and larger models can be solved.

ILP64 64bit integers.

Analysis Tools

MNF Builder

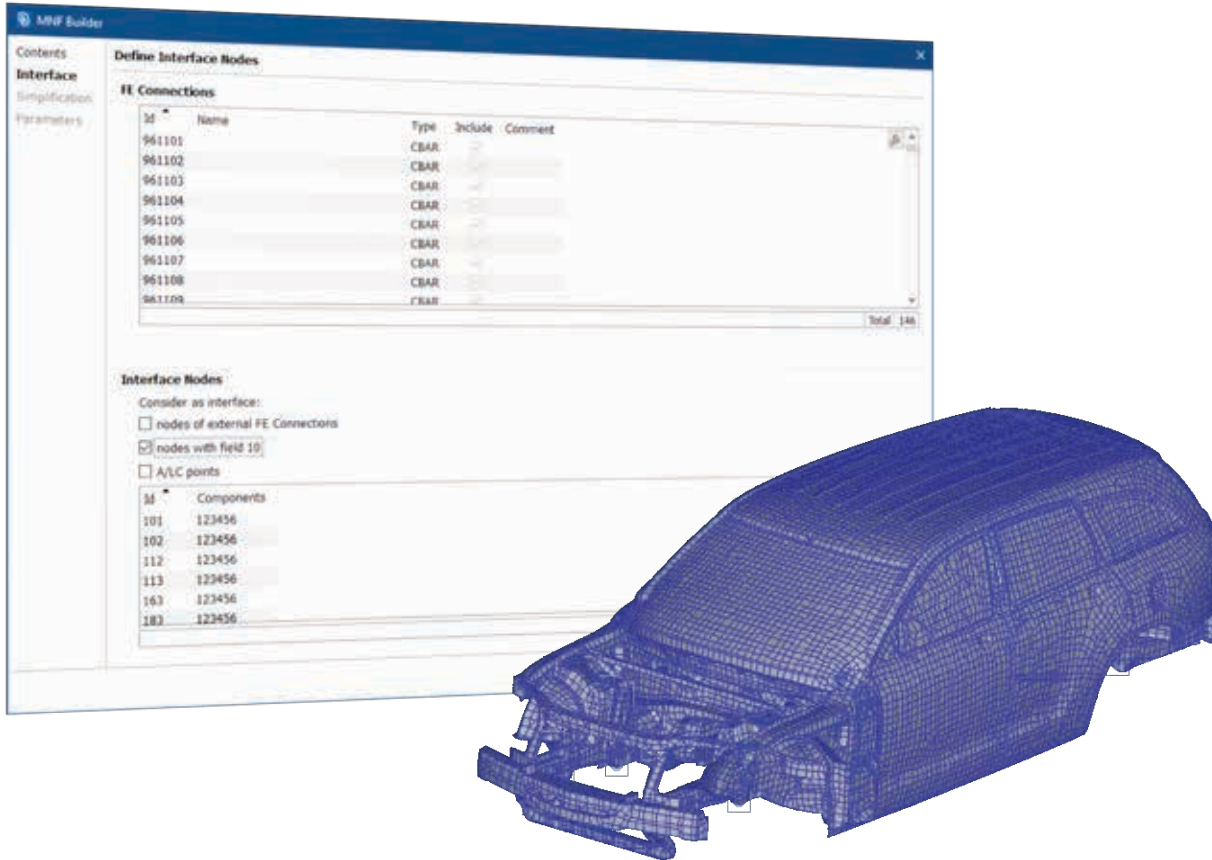

Normal Modes Analysis

Manufacturing Constrains Check

Grounding Check Analysis

Analysis Tools

V22.0.x

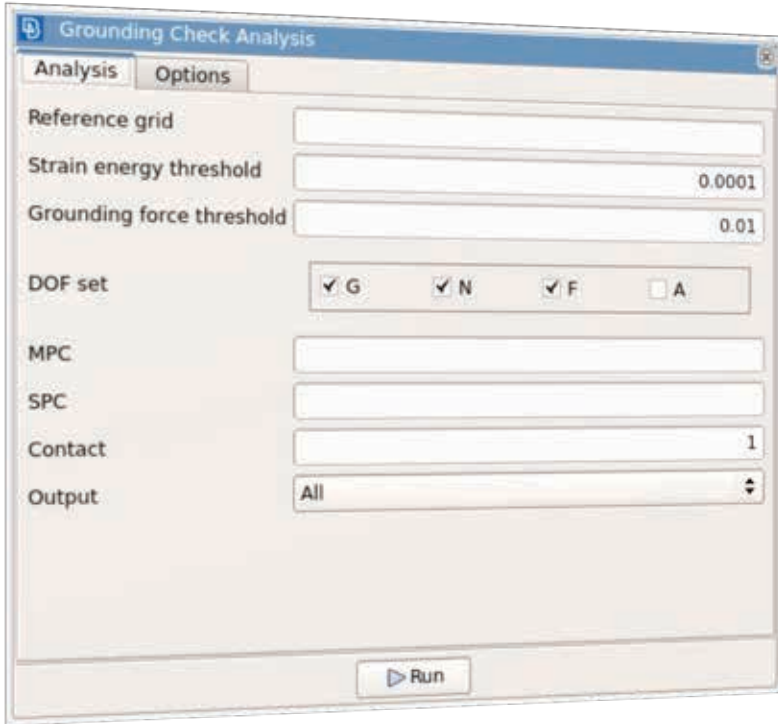

MNF Builder

Instant modal reduced representations

Display Model to reduce size

Analysis Tools

v22.0.x

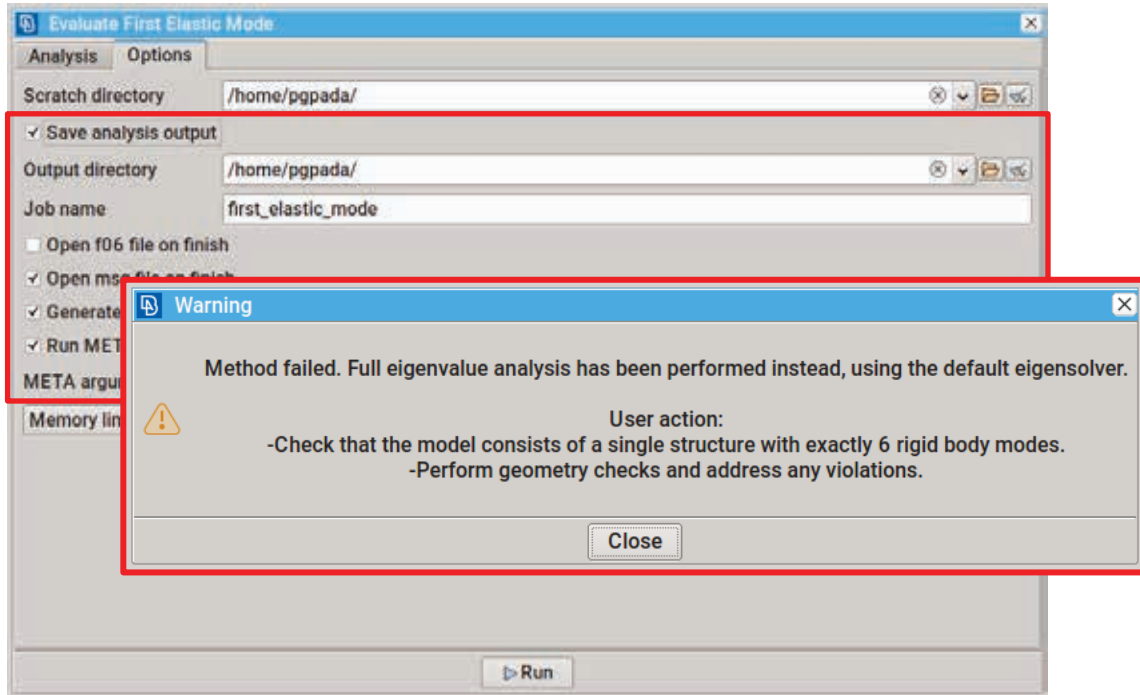

Grounding Check

Quick identification of unexpected constraints in the model

Epilysis Tools

v23.1.x

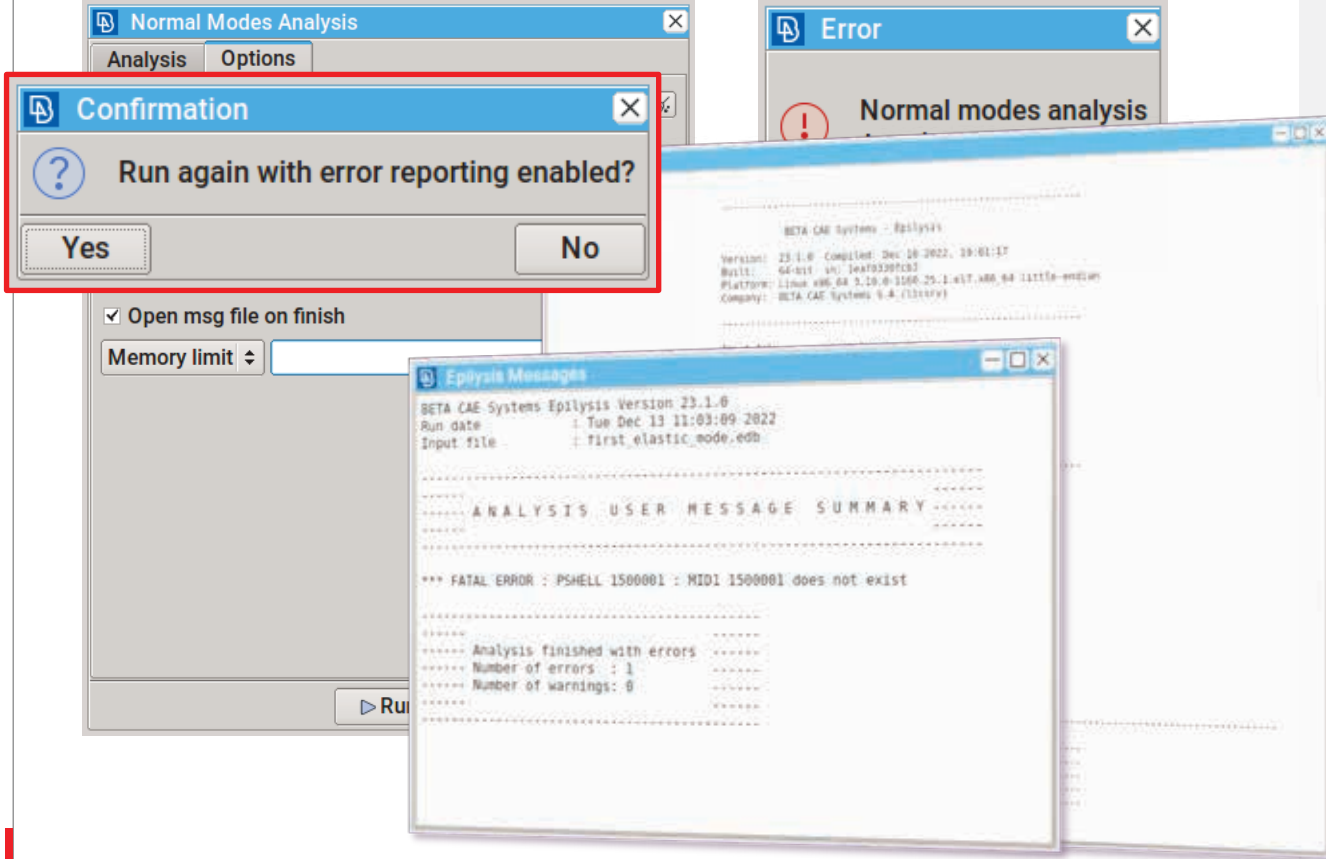

Save analysis output in all Epilysis Tools

Output an op2 and "Run META" in the First Elastic Mode Evaluation

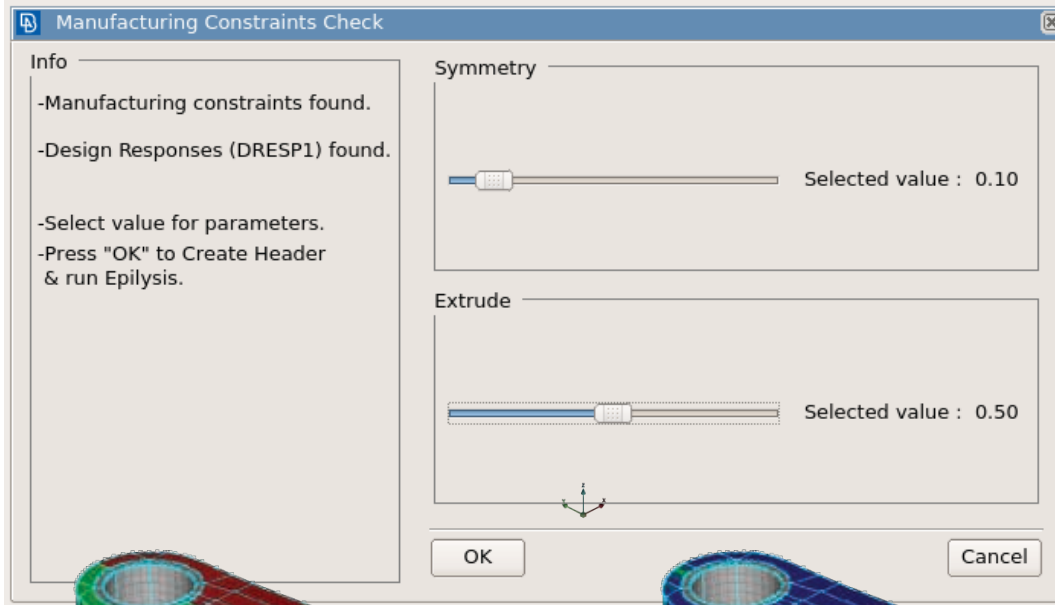

Epilysis Tools

v23.1.x

Reporting in case of errors.

Plugins

Manufacturing Constraints Check

Quick identification of problematic areas in the model

Parameter: TOPCOUT

Dynamics

PFMODEL, PFPANEL, PFGRID

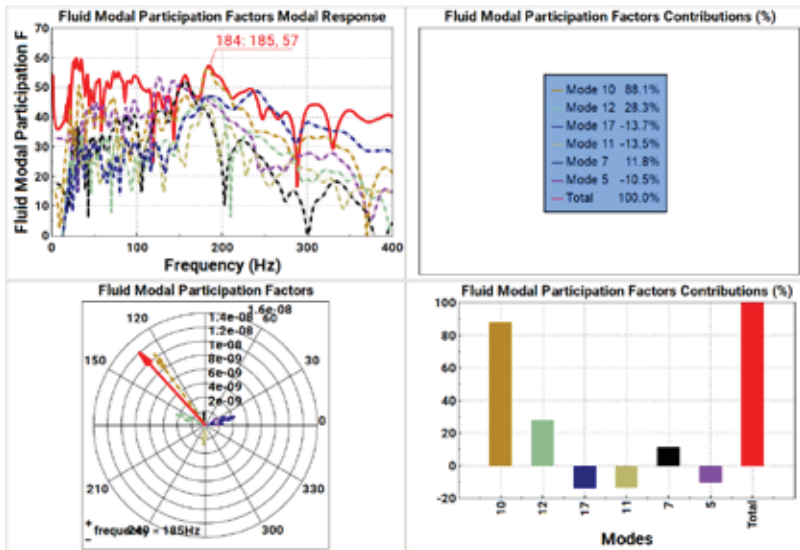

Fluid Structure Interaction

FMU and Modal Model

Element Sensitivity

PFMODE

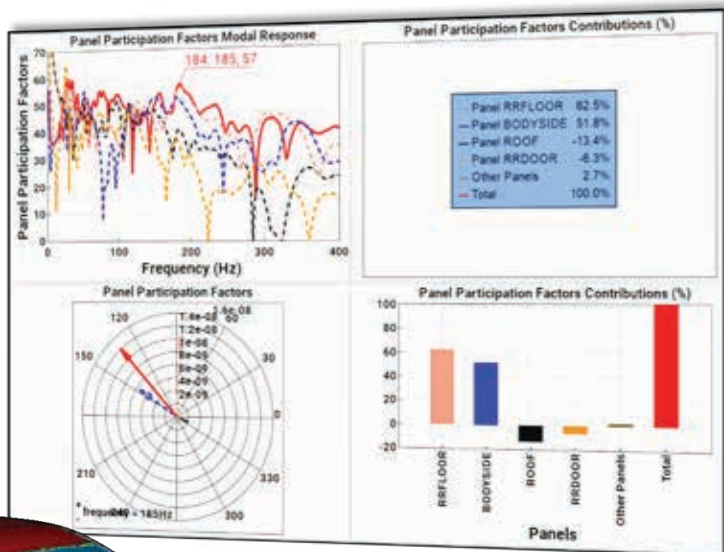

V22.1.x

Support of PFMODE modal participation factors.

PFPANEL

V23.0.x

Participation Factors for Panel have been implemented through PFPANEL Command and PANEL entry.

PFGRID

V23.0.x

Grid Participation Factors have been implemented through PFGRID Command.

The participation of the Fluid nodes on a Structural DOF response has been supported as an extra development.

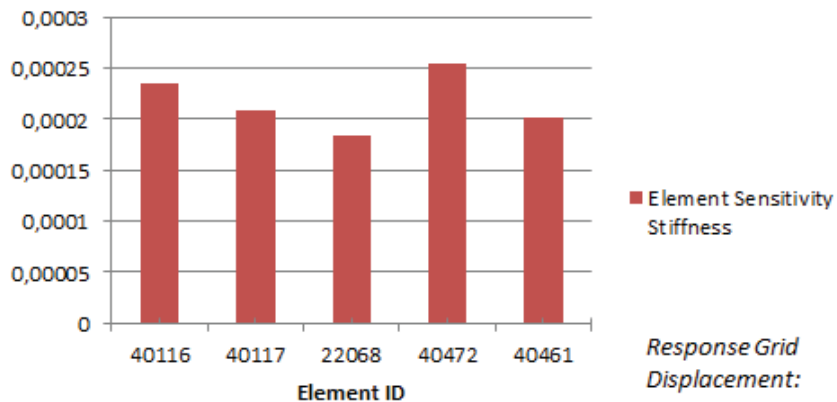

MEFFMASS

Modal effective mass command has been implemented

- MEFFMASS helps identify the direction and percentage of the mass that is moving in each mode.

Element Sensitivity Stiffness

Element Sensitivity output for SOL108/111 on specified Solution frequencies and Response DOFs has been added.

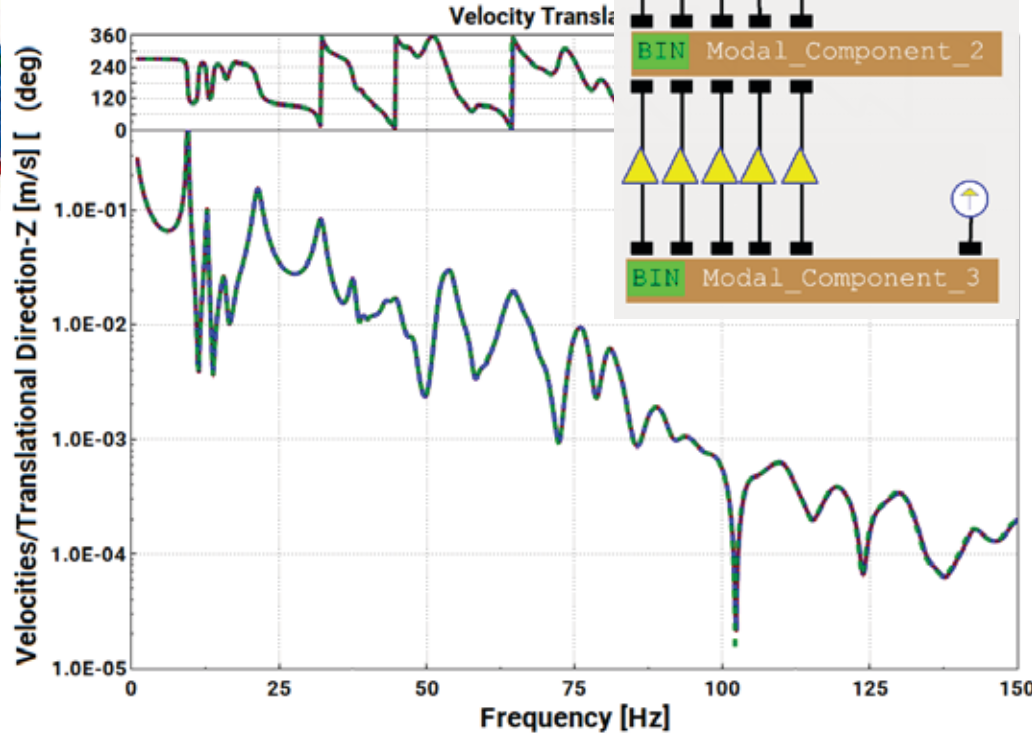

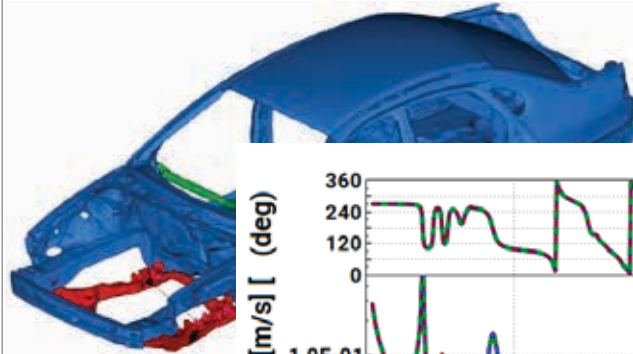

FSI

New Pressure Equilibrium Fluid Structure Interaction method has been implemented.

Session 7C:
Vibroacoustic coupling: A new Approach
Kostas Skolarikis

Modal Model

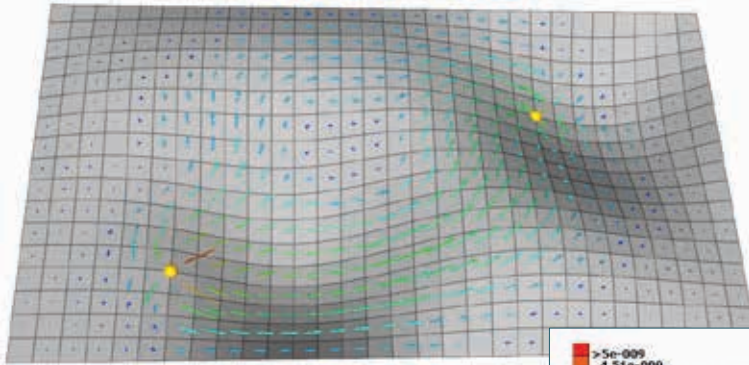

Fast SOL103 Epilysis

- Support of modal damping matrices BHH and KHH (input and output)

Session 7C:
Comparison of the numerical accuracy of Superelements and FRF Assembly
Markus Herbst

VINTENSITY / SINTENSITY

Vibration and Sound Intensity

FMU

v23.0.x

Multibody Dynamics
Export command

Generation of Function
Mock-up Unit format
State Space equations

AMLS

```

AMLS PARAMETERS
-----
PARAM, AMLSBS , 700
PARAM, AMLSSS , 3000
PARAM, AMLSWG , 1.500
PARAM, AMLSWA , 5.000
PARAM, AMLSWD , 0.800
PARAM, AMLSWVB , 1.700
PARAM, AMLSWVS , 1.100
PARAM, AMLSHOUT, 0
PARAM, AMLSHDOF, 2100
PARAM, AMLSNEIG, 20
PARAM, ALLDISP , 6
PARAM, AMLSRVT , 0.000
PARAM, P2MAP , NO

AMLS INPUT TABLE
-----
NUMBER OF DOFS : 140970
BLOCK SIZE : 700
SUBTREE SIZE : 3000
NUMBER OF RIGID BODY MODES KNOWN : 0
TOLERANCE FOR RIGID BODY MODES : 1.000 Hz
HIGHEST EXCITATION FREQUENCY (WF ) : 600.000 Hz
GLOBAL CUTOFF FREQUENCY (WG ) : 900.000 Hz
CUTOFF FREQUENCY FOR SUBSTRUCTURE EIGENVALUE (WA ) : 4500.000 Hz
CUTOFF FREQUENCY FOR DISTILLED EIGENVALUE (WD ) : 3600.000 Hz
CUTOFF FREQUENCY FOR SUBTREES EIGENVALUE (WVS) : 990.000 Hz
CUTOFF FREQUENCY FOR BRANCH SUBSTRUCTURES (WVB) : 1530.000 Hz
OUTPUT DOF NUMBER : 102
OUTPUT DOF NUMBER FOR THE TOP LEVEL : 102

```

AMLS Enhancements

- Improved robustness
- Additional parameters for better control
- New information in f06

Optimization

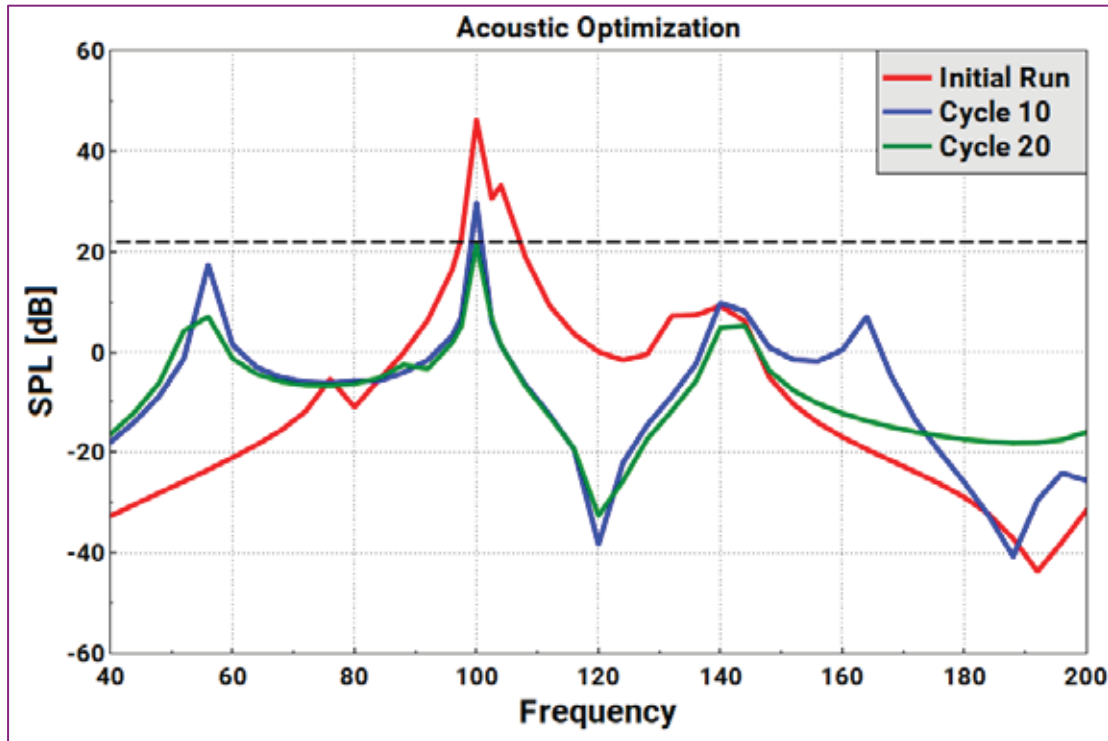

Optimization with Dynamic LCs

Laminates Enhancements

Cross-Section Optimization

Orthotropic Materials

Optimization Enhancements

- PRESSURE Results Minimization
- Curve constraints
- Beta multiple minimization

Optimization Enhancements

Bound Formulation

Maximize the N-th natural frequency

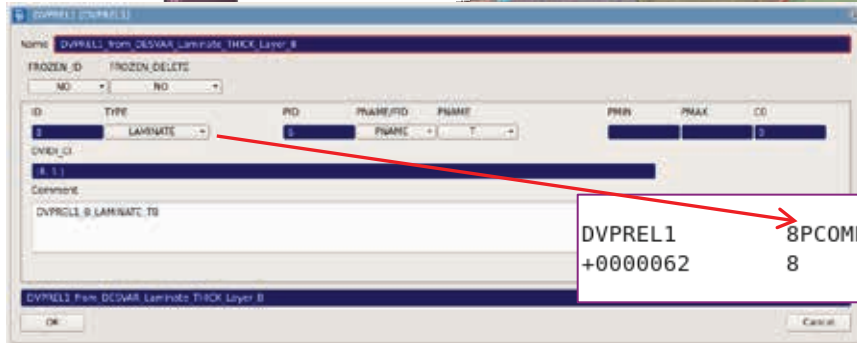

Maximize the gap between 2 consecutive natural frequencies.

Parameters:

- **BETA EIG**
- **BETA GAP**

Optimization Enhancements

V21.0.x

Laminates Enhancements

Support DVPREL of type PCOMPG and GPLY

Support DVPREL of type Laminate

MFREQ AMLS

Calculation of the sensitivities in the AMLS in MFREQ analysis

Optimization Enhancements

Dual Casting Constraint
for Topology
Optimization

Automatically adjustable
middle plane

Parameter: MIDPLANE

Contacts

Enhancements

Friction

Output options

Contact Enhancements

V21.1.x

Improved:

- Contacts checking
- Penetration checking
- Slide checking

Contact detection

V23.1.x

Improvement in contact detection at corner elements

Friction

Convergence

Convergence due to unconstrained body models.

Maximum number of Separations

```

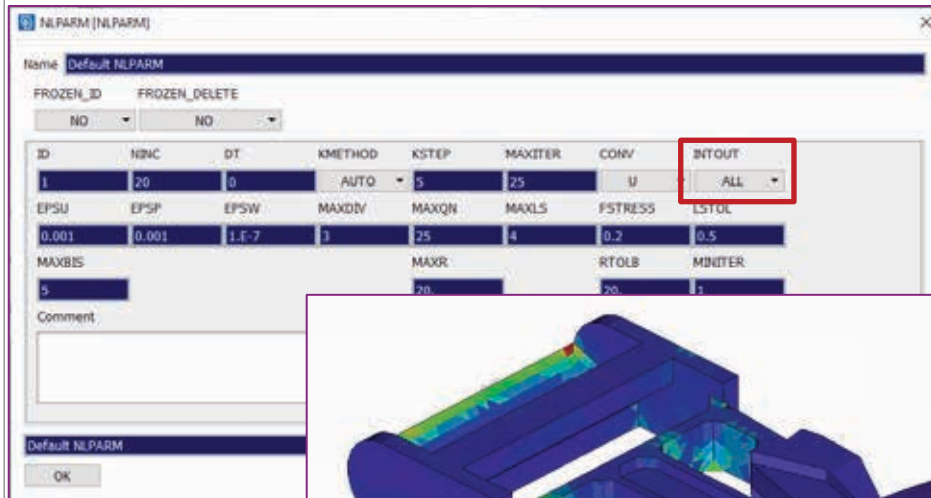

%5.00000E-02  1 11 4.71E-01 2.51E-04 1.04E-04 8.121 0 1 0 3.38E-07 8.994E-05 2.35E-06 5.366E-06 3109 3 1.00 0 0 0 11
SEPARATION condition has been detected. Additional iterations will be performed.
*** USER INFO : BCONECT 2000, slave BCBODY 2501, master BCBODY 2001. Iteration 12 separation. Number of contacts : 87.

SEPARATION condition has been detected. Additional iterations will be performed.
*** USER INFO : Separation checking is skipped. Maximum allowed number of iterations with separations has been reached for
the current load increment.
%5.00000E-02  1 13 9.00E-01 9.01E-07 1.10E-06 0.955 0 1 0 2.71E-05 0.999E-05 2.97E-06 0.292E-06 2092 3 1.00 0 0 0 13
  
```

Option MAXSEP in BCPARA

Maximum number of iterations with separation allowed for each increment.

Contact Enhancements

Support of option
INTOUT in NLPARM.

Contact Enhancements

V21.1.x

Messages regarding contact error and bias values.

```
*** USER INFO : BCONECT 1, slave BCBODY 1, master BCBODY 2.
                  Contact tolerance ERROR value = 5.000e-03. Contact tolerance BIAS value = 9.000e-01.
                  Biased contact tolerance on the outside of the elements surface = 5.000e-04.
                  Biased contact tolerance on the inside of the elements surface = 9.500e-03.
*** USER INFO : BCONECT 1, slave BCBODY 1, master BCBODY 2.
                  The search order is from BCBODY 1 to BCBODY 2.
*** USER INFO : Finite element model generated 1350 degrees of freedom.
*** USER INFO : AUTOSPC is active. 360 degrees of freedom were identified as stiffness singularities. These dofs were
                  automatically constrained with single point constraints.
```

Number of CPUs

SOL:
101,103,108,109,110,111,112,200,400

No extra licensing cost

No extra cost for AMLS & FastFR

No extra learning cost

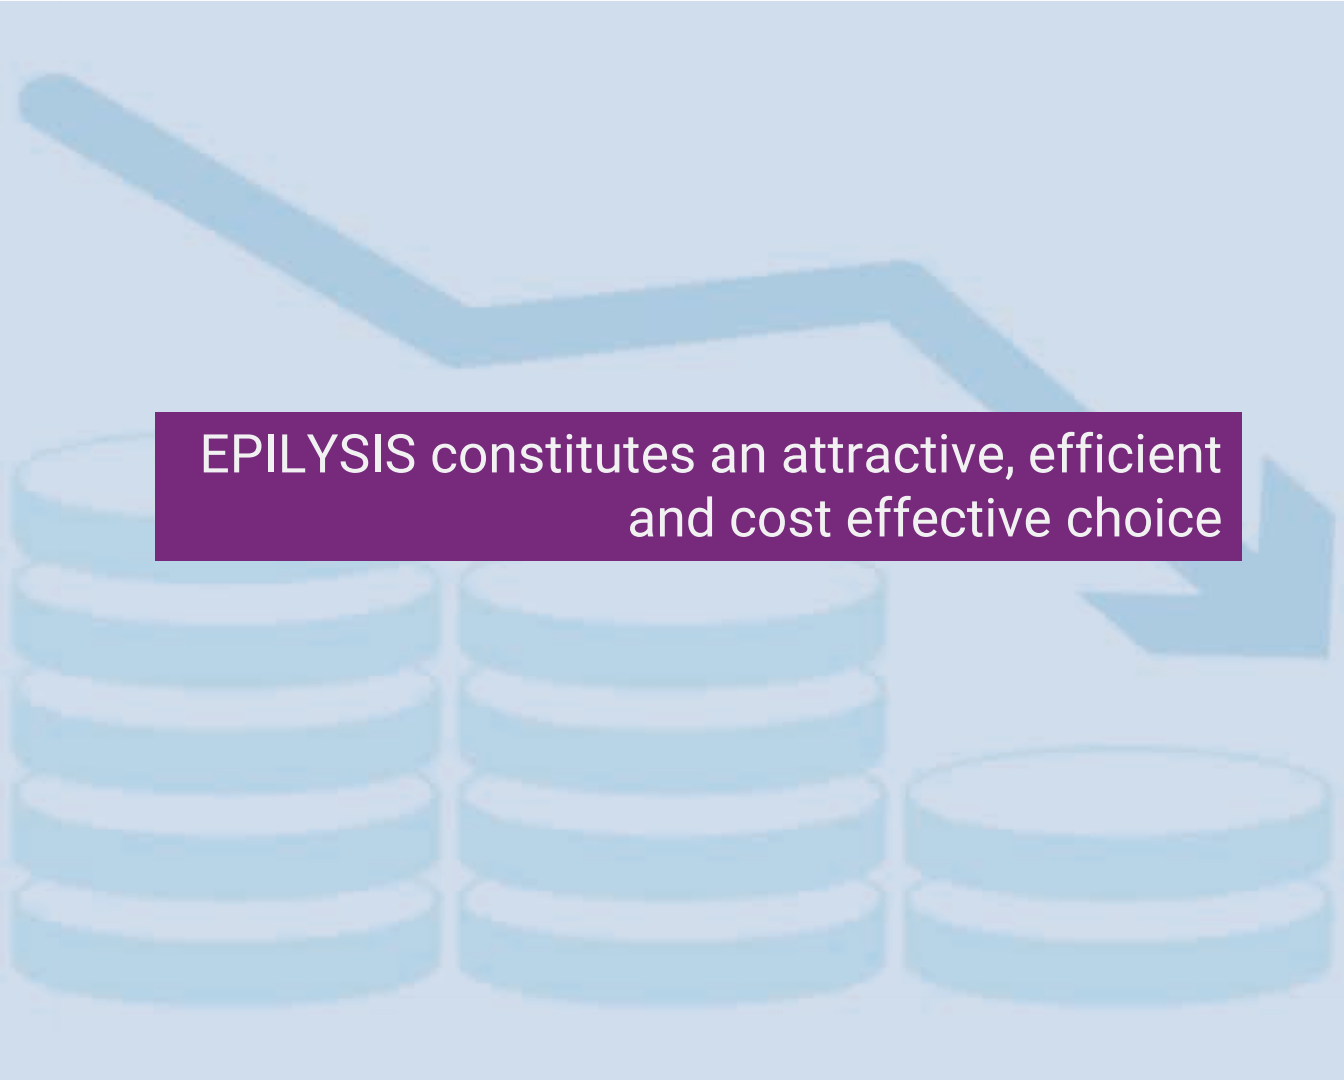

Not CPU-dependent

All features are included by default and use same credits

No extra licensing cost

No extra cost for AMLS & FastFR

No training & learning cost in cases where Nastran-based solvers are already being used

EPILYSIS constitutes an attractive, efficient
and cost effective choice

.... the right choice
