SIMULATION SOLUTIONS

ANSA and META v23
powerful pre- and post- processing
for advanced CFD simulations

physics on screen

*By permission of
Wirth Research Ltd*

ANSA specifications for CFD:

Supported platforms:

- Linux
- Windows

- ✓ Parallel processing on multi core hardware for maximum speed
- ✓ 64 bit code for unlimited memory usage
- ✓ Double precision for high accuracy

CFD formats:

Fluent (standard and HDF5)

Star-CD/CCM+

OpenFOAM

CFD++

CFX5

SC/Tetra

CGNS

TAU

SU2

FUN3D

RavenCFD

CobaltCFD

Kestrel AVMesh

PLOT3D

CMSOFT AERO-F

UH-3D

Other formats:

PATRAN

STL

VRML

and more..

Direct Interfaces with other CAE codes:

TAItherm

THESEUS-FE

NASTRAN

ABAQUS

ANSYS

LS-DYNA

and more..

CAD formats:

CATIA v4, v5, v6

Unigraphics NX

PTC Creo Parametric

JT

SolidWorks

Inventor

Parasolid

Rhinoceros

IGES

STEP

IFC

Input/Output:

Industrial scale pre-processing

Powerful generation and visualization of large CFD models

GMGW-2 CRM model
287 million cells

Geometry handling

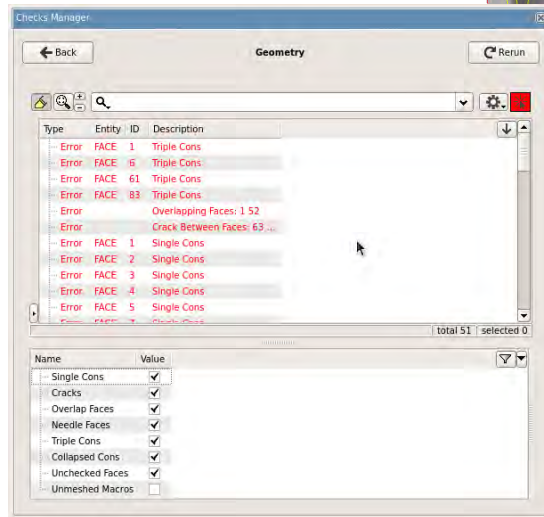

Geometry Handling

“CAD feel”, easy-to-use functions for creation and manipulation of geometrical entities (points, curves, surfaces)

Advanced automatic and manual clean up tools

Cutting planes for
model examination and
cross section creation

Courtesy of PSA

Raw CAD data

De-featured and
watertight model

De-featuring and watertight model preparation

Powerful algorithm to automatically isolate interior or exterior surfaces

Intersections

Contacts/Proximities

Emboss logos

De-featuring and watertight model preparation

Outer skin

Inner passages

Baffles

Combining Geometry and FE-model mesh (non-geometry mesh)

Powerful tools for management and connection of CAD geometry and existing FE-mesh

Boolean operations on geometry with option for fillet creation

Linked geometry

Link geometry available for symmetric or periodic (rotation or translation) similar geometry allows the generation of compatible identical meshes on each side in a straightforward manner

Geometry creation from surface mesh

Automatic creation of geometry from surface mesh based on intelligent perimeter identification algorithm.

- ✓  Holes 2D
- ✓  Holes 3D
- ✓  Fillets
- ✓  Special Perimeters
- ✓  Sharp
- ✓  Leading
- ✓  Free
- ✓  Trailing

- ✓  Special Perimeters
- ✓  Sharp
- ✓  Leading
- ✓  Trailing

Auto-detection of geometrical features

- Sharp edges
- Leading edges
- Trailing edges
- Fillets
- 2D/3D Holes and more..

Features can be removed or meshed with specific meshing rules

Surface Meshing

Surface Meshing

Multiple algorithms for
tria, quad or mixed-type
shell mesh

Surface Meshing

Automatic Macro Area
merging for high quality
surface mesh

Surface Meshing for CFD

Fully automatic surface meshing resolving all curvatures and sharp edges

Courtesy of PSA

Flexible size boxes for
mesh refinement

Size Boxes of arbitrary
shape for local surface
mesh control

Fully automatic
anisotropic mesh for
aerospace applications

Quad or tria anisotropic
mesh

STL meshing

For Lattice Boltzmann codes, like:

- ProLB
- Powerflow
- XFlow

Proximity detection and refinement

Proximity detection in shell mesh and auto-refinement

Surface mesh reconstruction

Reconstruction of existing FE-model mesh for element type modification, quality improvement, refinement, or coarsening, capturing all feature lines of the model

Automatic feature line detection

Remeshing specified element type

Refining

Coarsening

Surface mesh reconstruction

Reconstruction of bad quality STL mesh respecting local size and curvature

Imported STL
or unclean
geometry.

Surface wrapping

Variable length Wrapping,
capturing local curvature
and model feature lines

Surface wrapping

Variable length Wrapping,
capturing local curvature,
model feature lines with
proximity refinement and
contact prevention

Proximity refinement in surface wrapping

Ability to specify
proximity refinement
settings to avoid fused
areas between different
or same parts

Automatic detection
and closure of gaps and
openings

Leak detection tools

Fast leak detection
functionality with
interactive cut plane
visualization and
automatic leak closure

Watertight model creation for intersections, contacts and proximities

FEA analysis
shell mesh

Watertight exterior mesh
ready for volume meshing
for e-coat CFD model

Efficient creation of
models for e-coat
simulations starting
from FEA mesh

Triangulated shell
mesh

Volumized mesh
according to property
thickness

Automatic fusing of
contacts and
proximities

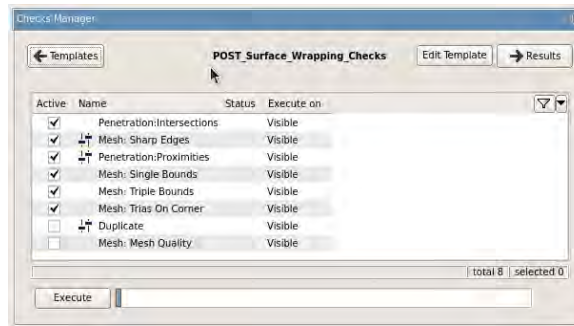

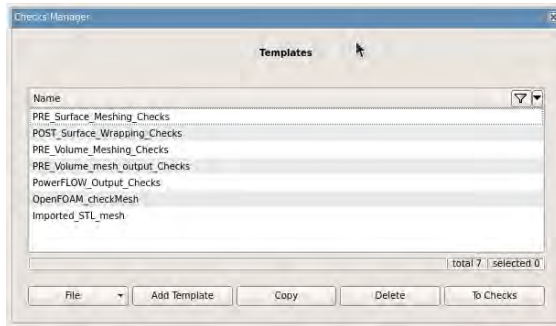

Final watertight
mesh with all
necessary details

Surface mesh checks

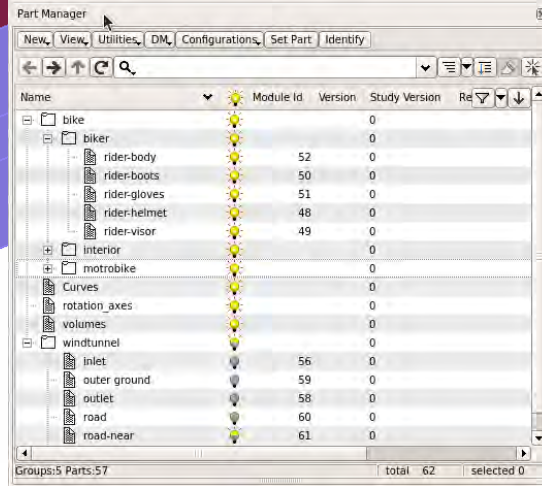

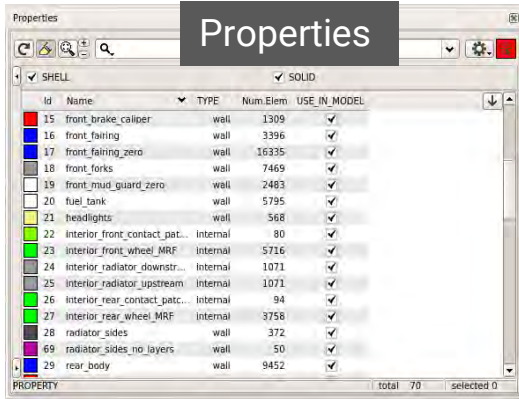

Quality check according to multiple criteria (skewness, angle squish, length, aspect, warp, etc.) and solvers (Fluent, Star, OpenFOAM etc.)

Clear identification of poor-quality elements

Template controlled mesh integrity checks (locate unmeshed areas, free edges, proximities and penetration areas, duplicate elements etc.)

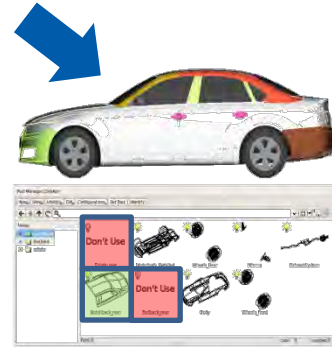

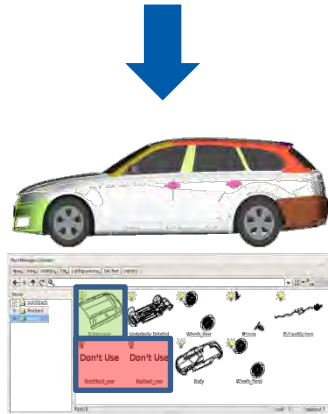

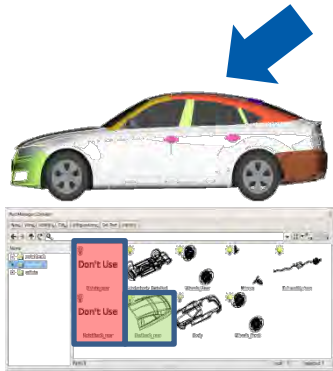

Comprehensive mesh information and quality statistics

CFD model management

Double parallel model management tools:
 Properties (corresponding to CFD model zones) and
 Parts (assembly hierarchy extracted from CAD data)

Configurations management of multiple variants

*DrivAer model courtesy of
Technical University of
Munich*

Advanced model comparison tool and local model updating

Functionality to compare current model with updates in other ANSA files, identify differences in geometry, or other attributes, and automatically update the current model with the necessary differences only

Volume meshing

*By permission of
FORD WERKE GmbH*

Volume meshing

Fully automatic volume
and sub volume detection
applicable to the most
complex problems

By permission of Volkswagen AG

Volume meshing

Fast and robust volume meshing for all types of elements (tetra, pyramid, prism, hexa and polyhedron)

Conformal mesh for MRF and porous zones and for conjugate heat transfer analyses

Handling of multiple fluid and solid zones

Non-conformal mesh for moving mesh analysis

Periodic BCs matching node meshes

Solar car and urban environment simulations

Courtesy of Actiflow BV

Aerospace case EV-55

Courtesy of Evektor

Complete volume mesh
of a human heart

2 million trias, 23 million
prisms and tetras

Hexa-Interior volume meshing

Fully-conformal variable size Hexa-Interior mesh with prism and pyramid transitions

HexaPoly volume meshing

Variable size hexa mesh
with polyhedral elements
for transitions

Size Field controls

Advanced functionality
to control mesh size:

- Flexible Size Boxes
- Closed iso-surfaces

Size Field controls

Advanced functionality to control mesh size:

- Offset surfaces
- Sweeping surfaces
- Point and Curve sources

Solution adaption

Ability to read a size field from external solver and generate a mesh based on the specified lengths

Advanced boundary layer generation functionality

Multiple options:

- Auto exclude or collapse areas
- Controlled Layer Squeezing to avoid intersections
- Layers from selected areas with different settings
- Layers from zero-thickness walls
- Layers with variable growth rate per layer

Squeeze option

Collapse option

Exclude option

Boundary layer collision avoidance modes

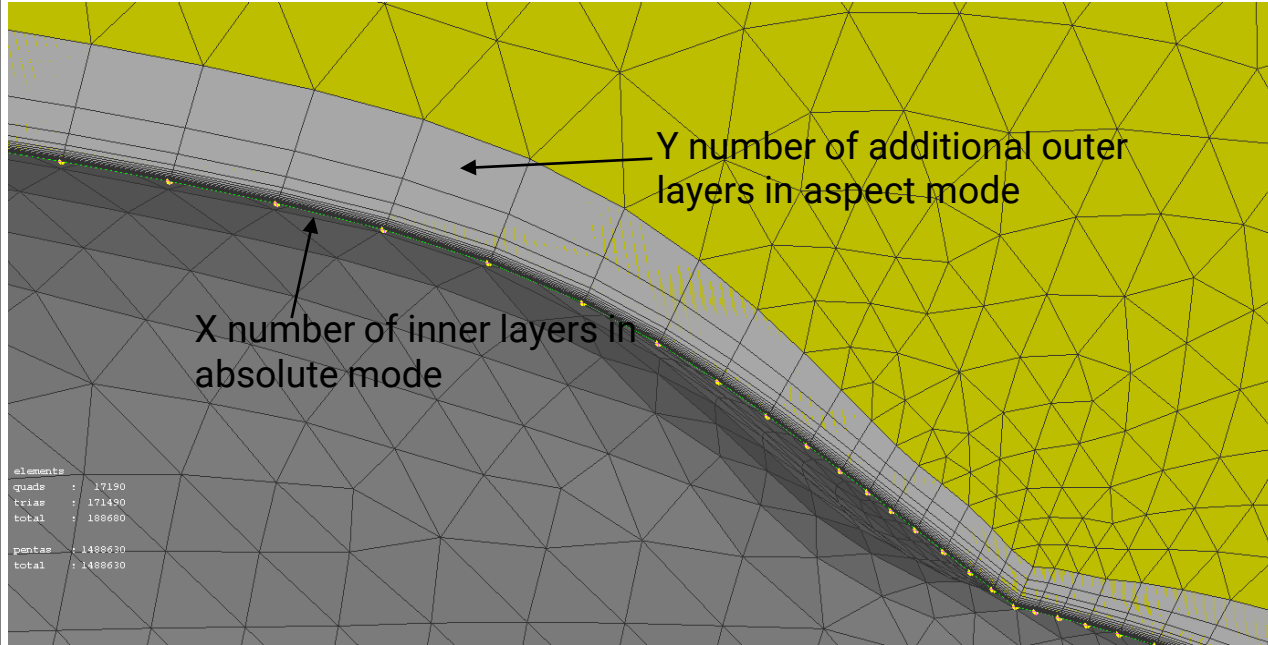

Automatic fix of intersection and proximities in any of three options

Collapse free edges

Flexible specification of layer growth

Ability to create an X number of layers in absolute height mode and then switch to aspect mode for the outer additional layers, thus ensuring a good cell volume change between the layers and the tetra mesh

Robust layers
generation at extreme
heights and proximities

Powerful algorithm for
very large total layer
height and severe
proximities

Conversion of hybrid meshes to polyhedral

Converted HexalInterior mesh

Converted tetra and layers

Layers excluded from conversion

Polyhedral conversion options

Hextreme volume meshing

Fully automated, highly controllable, trim hexa and polyhedral mesh generation without the need for watertight volume definitions, running on multi core hardware

Semi-automatic hexa/penta meshing

HexaBlock meshing

Hexa meshing based on
block structures
associated to the model

HexaBlock meshing

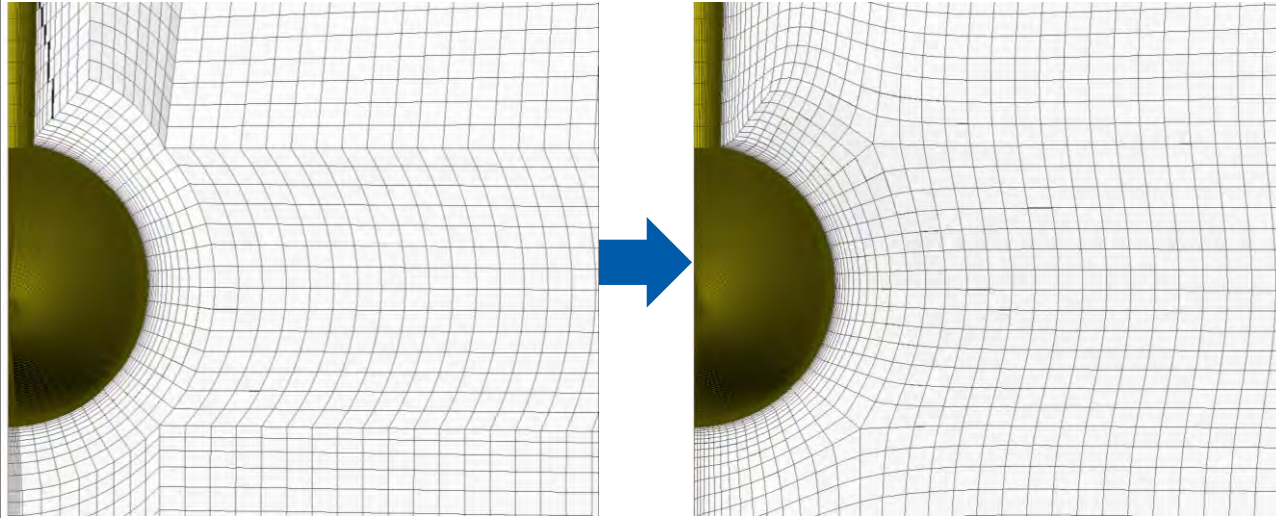

Numerical simulation of
flow through S-duct - 1st
Propulsion Aerodynamics
Workshop

HexaBlock meshing

Hexa meshing external flows

HexaBlock meshing

Advanced smoothing
algorithm with imposed
orthogonality near the
walls

HexaBlock meshing

Automatic template
driven hexa meshing
for turbomachinery
applications

HexaBlock meshing

Fuel injector

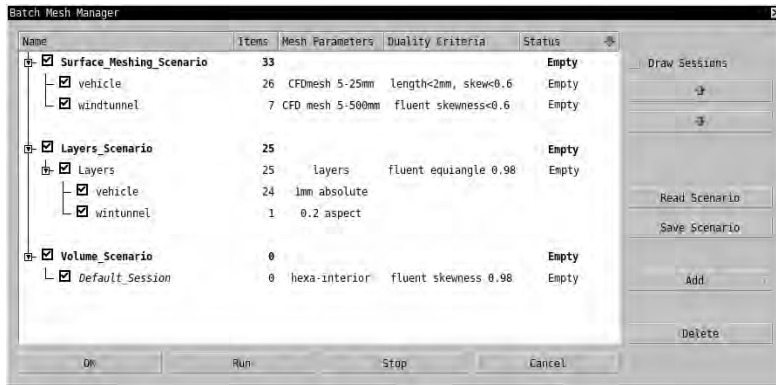

Pure Hexa Mesh

HexaBlock meshing of generic jet exhaust under wing

Combination of hexa mesh with hybrid mesh

Batch Meshing tool for complete CFD mesh generation

Batch Mesh provides:

- Automation
- Consistency
- Mesh specs traceability

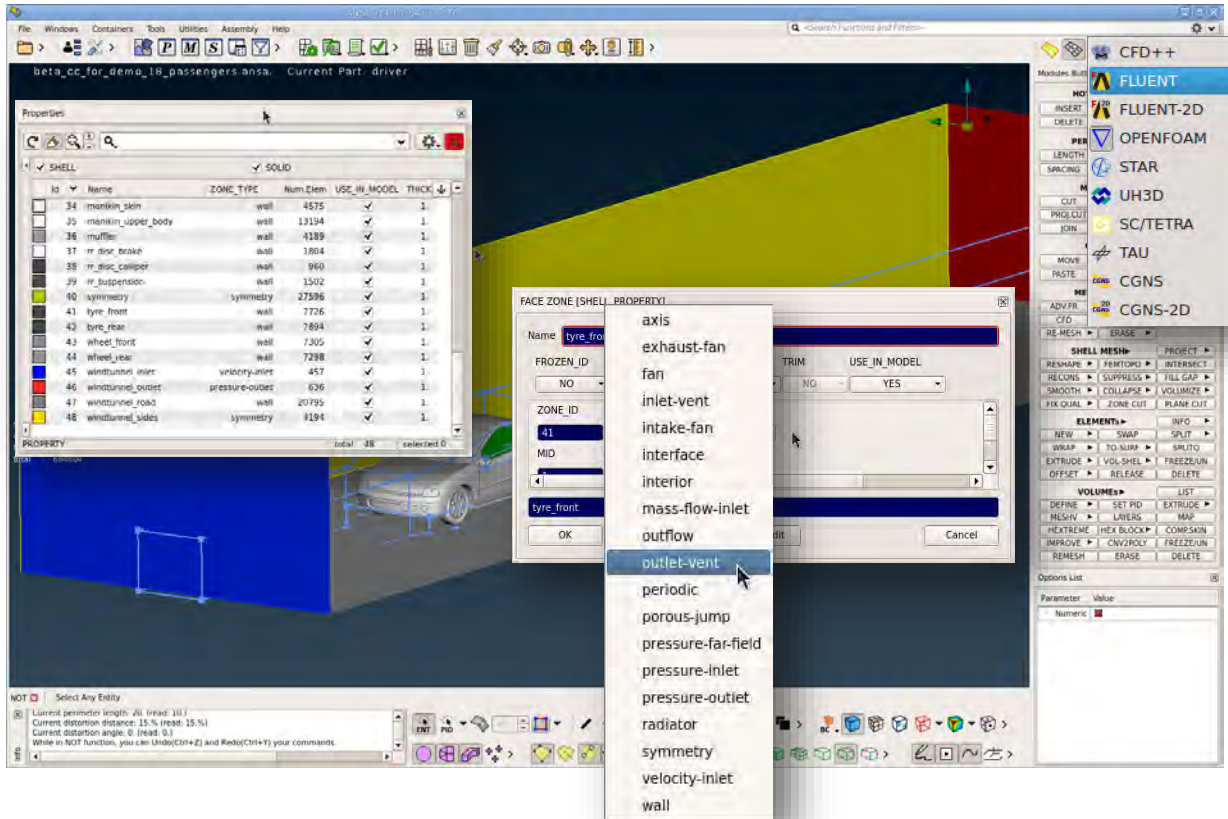

Automated mesh refinement study HLPW 4 model

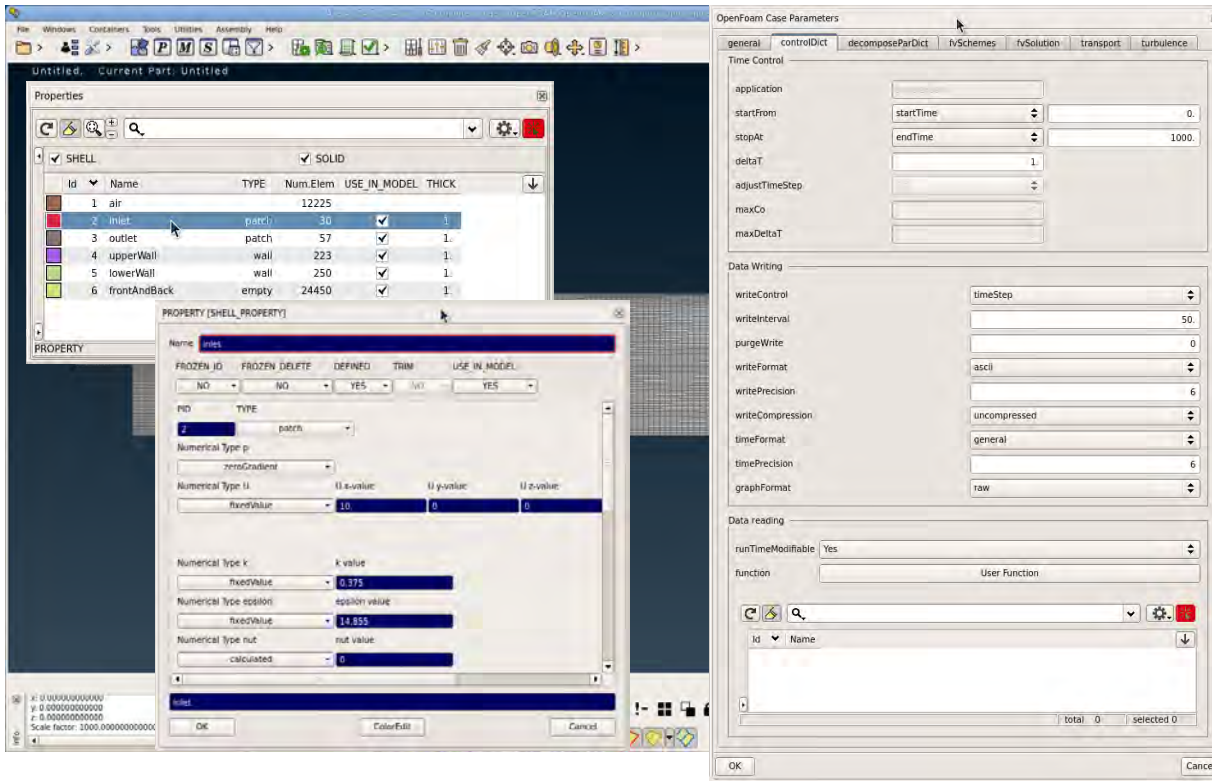

Level A: 91 million
Level C: 276 million
Level E: 723 million

Output solver files

Boundary condition type specification for various CFD solvers

Full support of OpenFOAM mesh and case setup

Boundary conditions, porous and MRF zones, turbulence models, controlDict support, integrated checkMesh and more

Thermal management support for TAItherm and THESEUS-FE

Direct I/O of native *.tdf files (TAItherm) and *.tfe files (THESEUS-FE)

Support of shell and solid mesh, Parts (single and multilayer) and Assemblies, Materials, Boundary conditions and main solver settings

Morphing

ANSA Morphing

ANSA morphing tool has the following advantages:

- It provides flexible parameterization of your CFD model
- It is highly controllable allowing the user to perform the exact modifications that are required
- It employs fast morphing algorithms that can be used efficiently and robustly on large CFD models
- It is integrated in the same environment so that it can be used in conjunction with the powerful ANSA functionality for geometry handling and surface and volume meshing
- It allows scaling and history tracking of morphing actions
- It is applicable to surface & volume mesh and geometry
 - Morphing can be performed interactively or in pure batch mode, also coupled with optimizer software
- It can be used with direct interfaces with all major CFD codes, like Fluent, Star CCM+, and OpenFOAM among others

Morphing

Morphing of shell and volume mesh by user-interaction, or in batch mode accelerates engineering development

Morphing for external aero

Original mesh

After morph

Skewed solids

Reconstruction

Rear windscreen morphing

By permission of Volkswagen AG

Morphing of rear spoiler

Morphing of ship rudder

Morphing on train model

Scalable morphing deformations

Support of adjoint sensitivity guided morphing

Sensitivity Based optimization with ANSA morphing boxes and parameters that control the motion of morphing points using solver calculated sensitivities

Changing the ride height setup with direct morphing

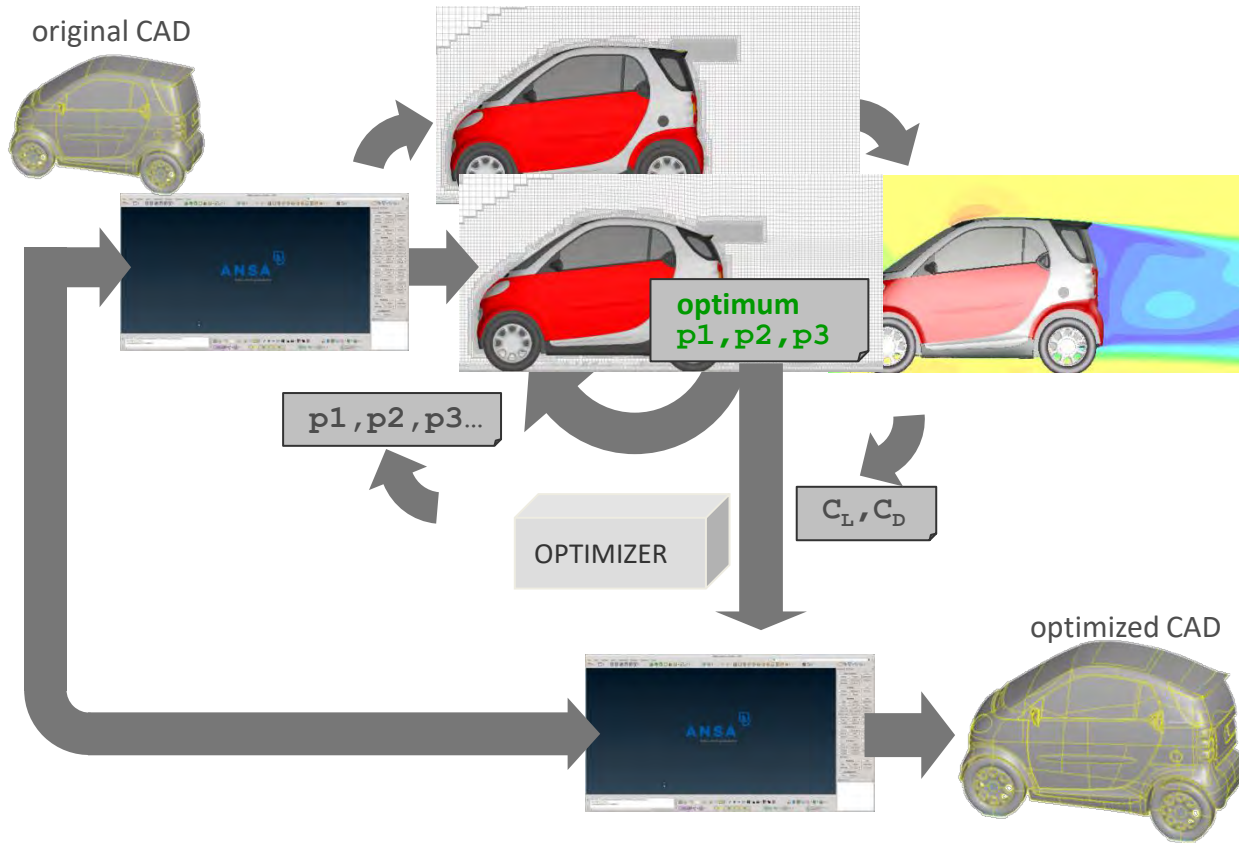

Positioning of the suspension setup without losing the watertight integrity and quality of the mesh

Changing the ride height setup with direct morphing

Positioning of the suspension setup without losing the watertight integrity and quality of the mesh

Morphing optimization loop

Create a model in ANSA
and solve in CFD solver

Extract the pressures from
the CFD solver and map
them on an FEA mesh using
ANSA Results Mapping tool

Fuel and resting liquid calculations

One common pre-processing platform for all CFD solvers

- CMSoft AERO-F via scripting
- NASTRAN, ABAQUS, ANSYS, TAITherm, THESEUS-FE and more...

Post- processing

META
POST PROCESSOR

From solver results to report

- 3D post processing
- 2D post processing
- User calculations
- Correlation studies
- Reporting
- Automation tools

META

An advanced CAE post-processing tool for FEA and CFD analysis

Basic concepts and features:

- Powerful tools for 3D & 2D Post Processing
- High performance graphics
- Low memory footprint
- Best-in-class multi-model handling
- Generation of high-quality reports
- Outstanding automation capabilities

ANSYS

- Fluent 2d and 3d standard and HDF5
- CFX
- CFDpost *.cdat

OpenFOAM

- ascii/binary data, partitioned results
- FEMZIP file support

StarCCM+

- *.ccm, *.sim, *.simh and *.trk files

CFD++

SC/Tetra

SU2

CGNS

DLR-TAU

AVL-FIRE

PowerFlow

Converge

TAITherm

THESEUS- FE

LS-DYNA ICFD

ABAQUS CFD

Enight

Tecplot

Paraview VTK, VTU, VTP

Plot3D

XDMF

CAD Files

- IGES, STEP, Catia, STL, VRML, Wavefront and more....

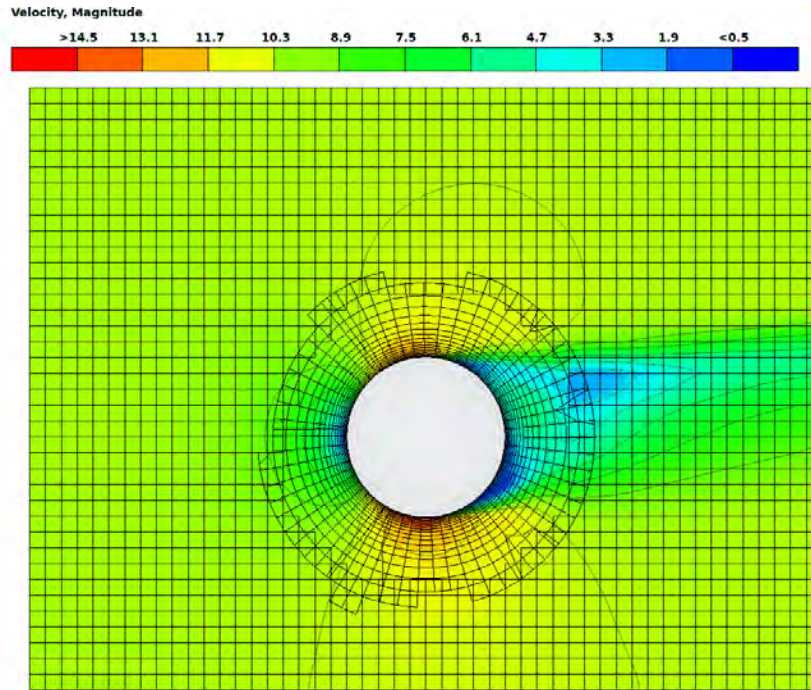

Supported format

Supported formats

- Standard and Polyhedral elements
- Steady state and transient results
- MRF (multiple reference frame) zones and moving mesh

Support of overset meshes for Fluent and StarCCM+

Cut Planes and Iso-Surfaces

DrivAer model courtesy of Technical University of Munich

Line Integral Convolution visualization

Volume rendering

Streamlines and Oil-flow display

Creation of Streamlines and Pathlines for transient analyses

Transient Streamlines

Pathlines

Multiple streamline visualization options

Total pressure contours

Velocity vectors

Double fringe bars for simultaneous display of contour and vector data

Symmetric and
periodic display of
results

DrivAer model Courtesy Technical University of Munich

Camera matching tool

Correlate physical images
and videos with CFD
results

Animation editor tool
for creation of flying
camera videos

Materials rendering and environment mapping

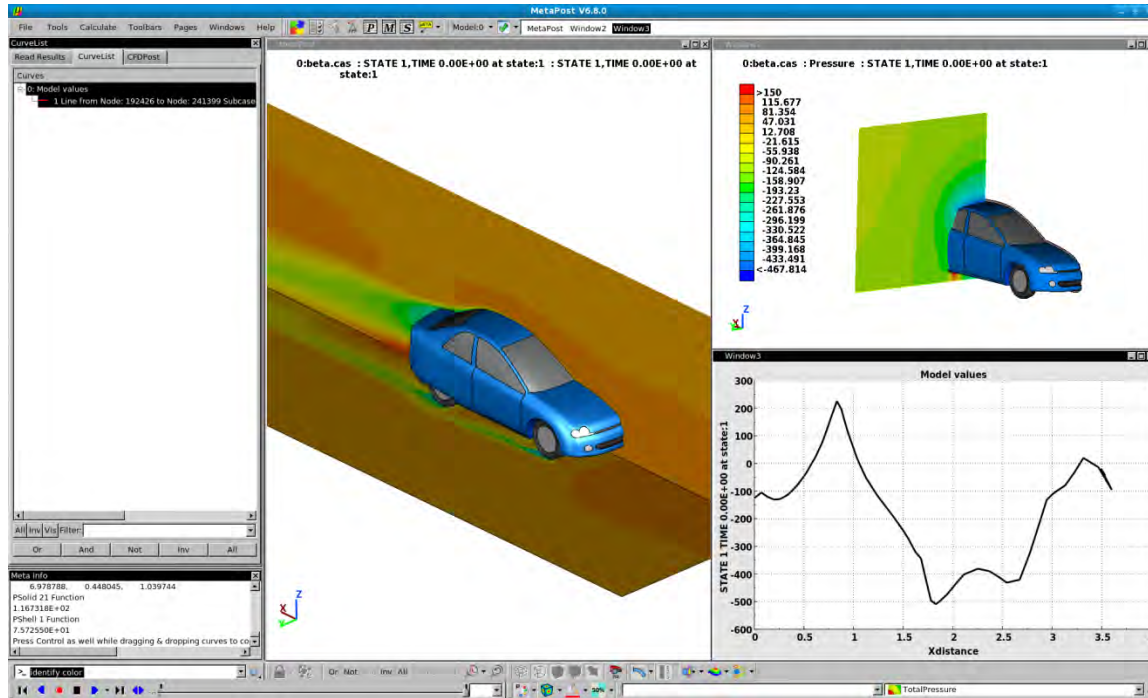

Rendering with material textures

Textures from imported image files can be applied on models

Multiple light sources

Multiple windows

- 3d and 2d windows
- Setup styles and entities visibility per window
- Different models can be placed in one or more windows

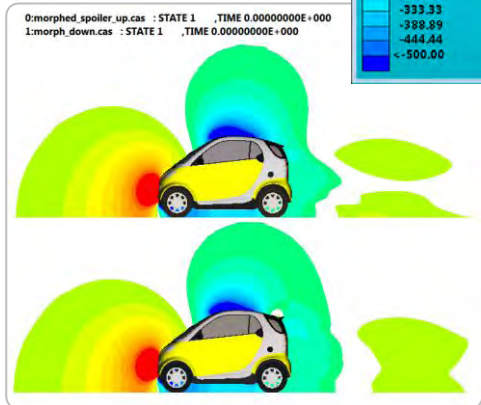

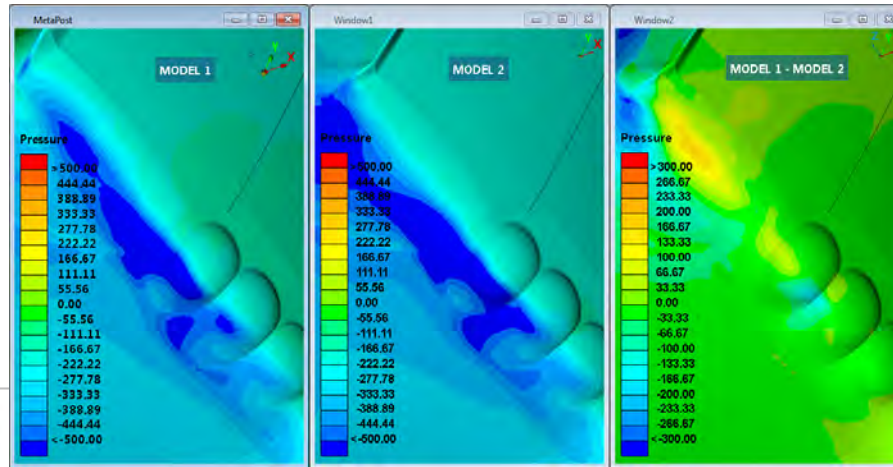

Multiple model handling and comparison

Load multiple models and compare cases from different solvers, meshes, physical models and numerical setups

Multiple model handling and comparison

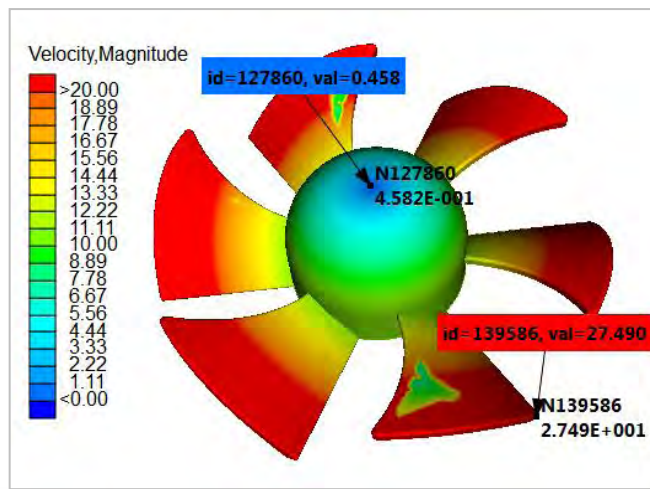

Map results from one model to another and calculate their differences

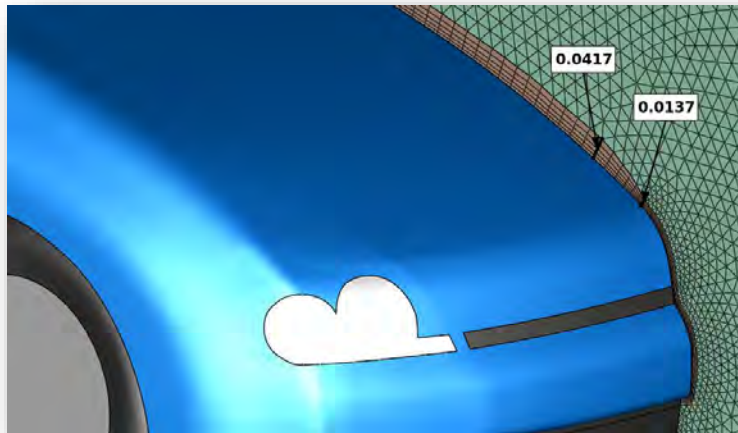

Session file support for replaying all post-processing actions

- Overlay and compare multiple iterations of data
- Set the respective files or paths of the second model
- All new data are automatically overlaid on the respective windows

Query of model dimensions

- Measurement of distance, angle, area
- Projected Area measurement Identify Min/Max values or critical areas
- Annotations

Projected Area: 1.884

- Animated GIF

Project File

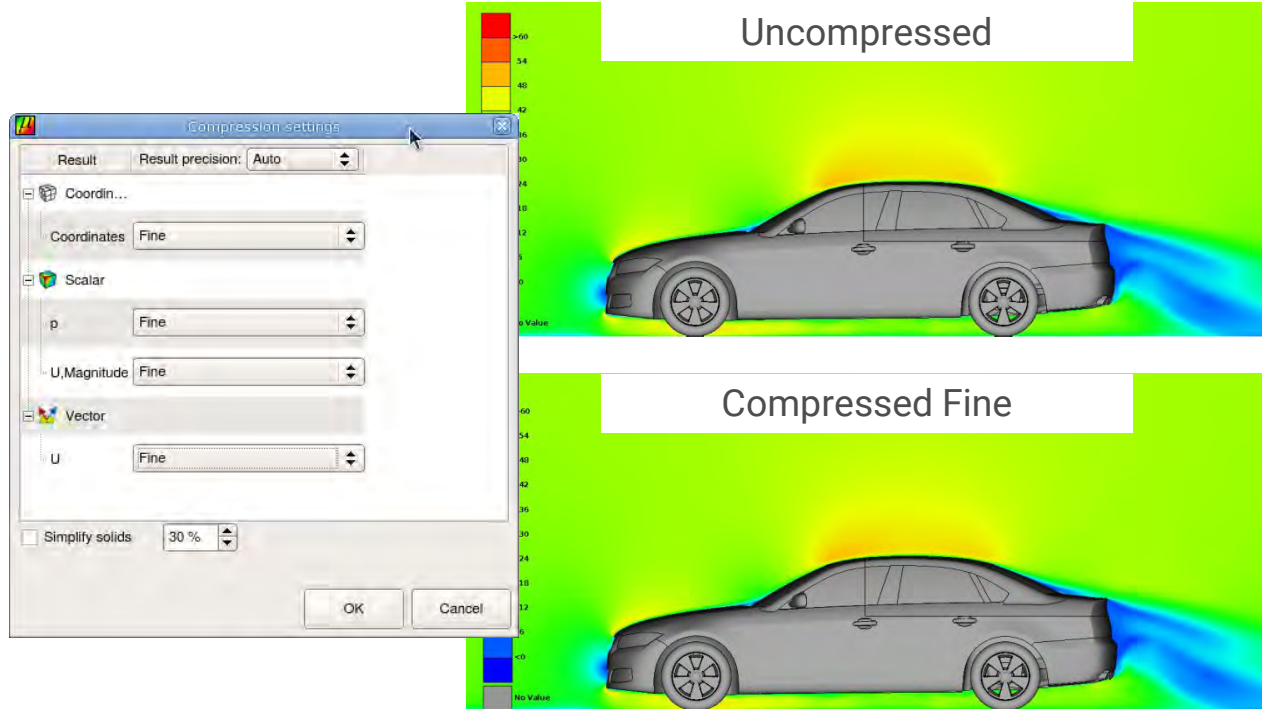

META native binary format file

META Project file

Output all current entities, results & objects in a project file

Data compression of project files

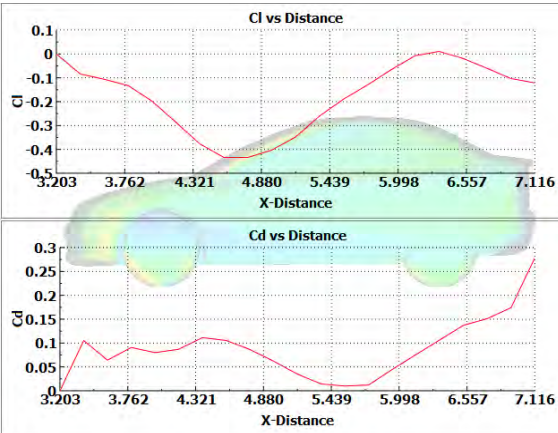

META offers the possibility to save a Project file with compressed data leading to significant file size reduction without loss of accuracy

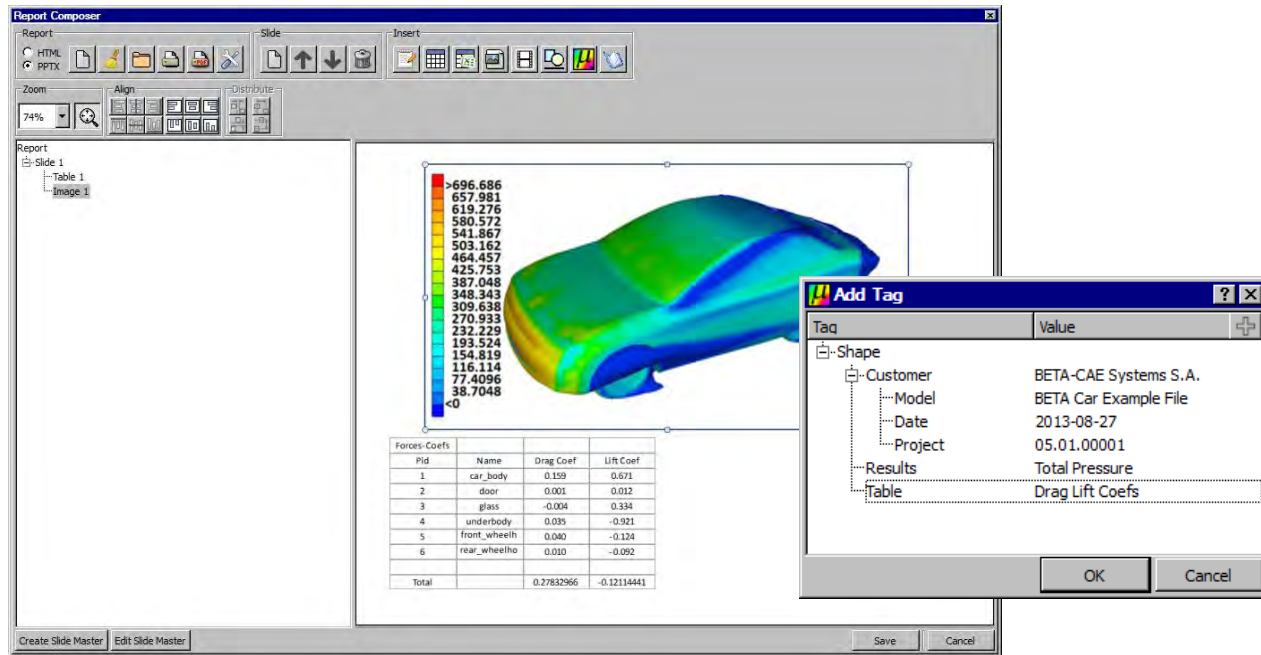

Summary report

Forces-Coeffs			
Pid	Name	Drag Coef	Lift Coef
1	car_body	0.159	0.671
2	door	0.001	0.012
3	glass	-0.004	0.334
4	underbody	0.035	-0.921
5	front_wheelhouse	0.040	-0.124
6	rear_wheelhouse	0.010	-0.092
Total		0.27832966	-0.12114441

Report capabilities

- Create HTML, PPTX or PDF reports
- Add images and videos
- Support of META viewer objects
- Reports can be tagged, stored and quickly recovered

META viewer plugin

- License free reduced version of META
- Web Browser, PowerPoint Plug-in and standalone executable
- Loads Project Files only

Conclusions

ANSA covers all the CFD pre-processing needs in a single environment, from CAD import, to advanced model management , geometry cleanup and preparation, automated surface and volume meshing and finally morphing and optimization.

It offers to the user the choice between high quality mesh generation on the geometry level and also quick meshing solutions like surface wrapping, depending on the needs and resources of the project.

ANSA provides high quality meshes for all CFD solvers, offering the possibility to make comparisons or use several codes depending on your needs and is also one common pre-processor platform for all other CAE disciplines, facilitating data exchange between different departments.

META provides powerful automated post-processing for CFD and integrates with ANSA as a complete pre and post-processing solution for industrial applications.
