CFD Progetti – Integration of ANSA in an Open-Source Environment

**Challenge:**
- to develop an optimization procedure able to speed-up geometry modifications handling
- to enable interconnection and integration between commercial and open-source tools

**Approach:**
- geometry/mesh handling and modification by means of ANSA Morphing features
- ability to use both commercial and open-source codes, in order to define a customized in-house procedure
- implementation of interfaces by means of C++ code

**Results:**
- speed-up due to simplifications and intuitivity in geometry/mesh handling
- AD-HOC procedure: ability to make communicating and interfacing different kind of tools

“ANSA entirely changed the idea of CFD and FEM simulations; its morphing features enabled geometry/mesh handling speed-up that made optimization feasible and affordable in a competitive time.“

Gabriele Ottino
